

WhimsyLabs: The *Practical* Solution for Science.

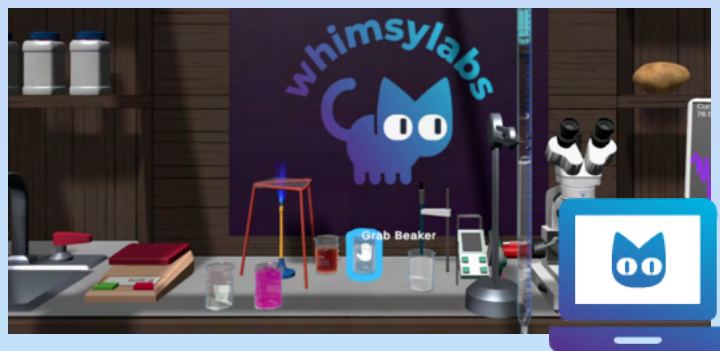

Stop clicking, start doing.

WhimsyLabs isn't just a simulator; it's a playground of particles. We combine a best-in-class Physicality-First engine with AI-driven assessment to deliver the only virtual lab that builds true muscle memory while saving teachers hours of marking time.

Available on VR Headsets & Desktop (Chromebook/Mac/PC).

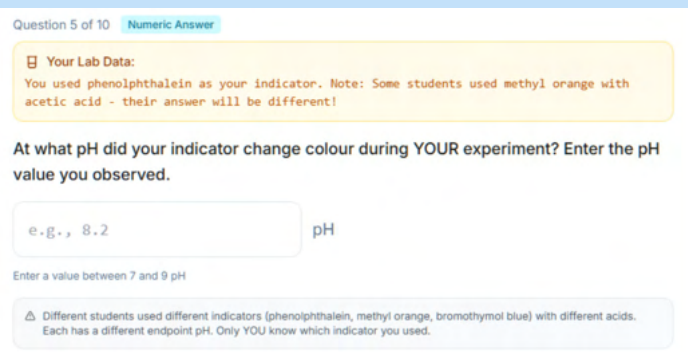

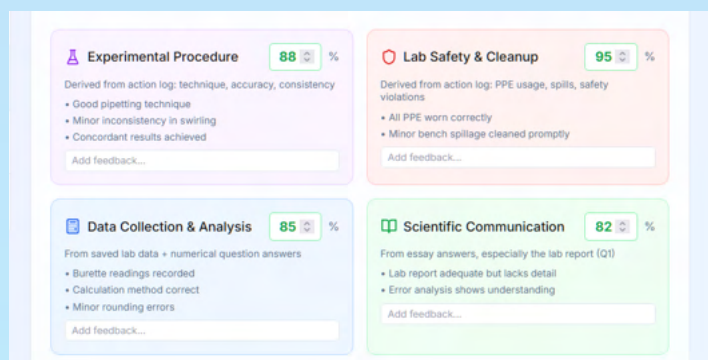

Muscle Memory Forged In Simulations, Not Just Mouse Driven Animations.

Unlike "slide-show" simulators, our engine replicates the chaos and weight of the real world, down to temperature perturbations, impurities and deviation between samples. Whether pouring titration fluids in VR or adjusting microscope focus on a Chromebook, students must use fine motor skills and procedural accuracy. If they drop a beaker, it breaks. If they overheat a compound, it reacts. This "freedom to fail" builds resilience and genuine understanding of laboratory risks.

Assessment Beyond Text.

WhimsyLabs AI-proofs assessments by grading the process, not just the result. We track physical inputs within our virtual labs, like equipment handling and reaction times, which AI cannot simulate. Follow-up questions are strictly tied to the student's unique experimental data, rendering generic AI answers unhelpful.

Save 3.5 Hours of Grading Per Week.

Stop ticking boxes and start teaching. WhimsyLabs assesses skill mastery and safety in real-time, providing automatic grading on students' capabilities for you to review.

Data That Drives Intervention

Our dashboard offers a real-time view of student performance, not just grades. Instantly identify struggling students for timely intervention before they fall behind. Export reports easily or integrate directly with your LMS to track progress from individual students to entire regions.

Your Lab, Your Rules

Don't be limited by pre-set scenarios. Students can mix any reagent with any equipment to test their own hypotheses.

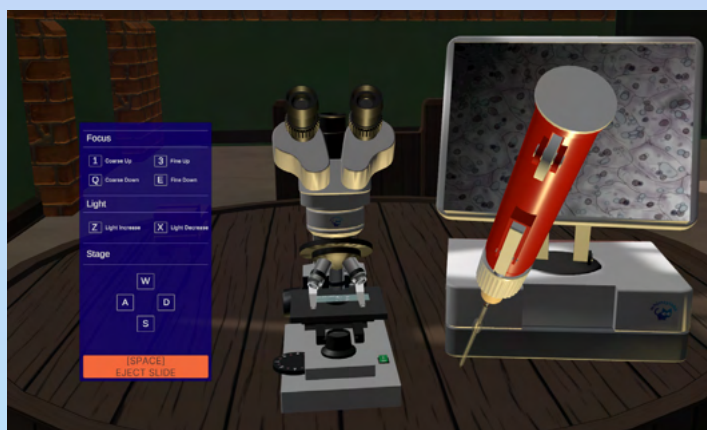

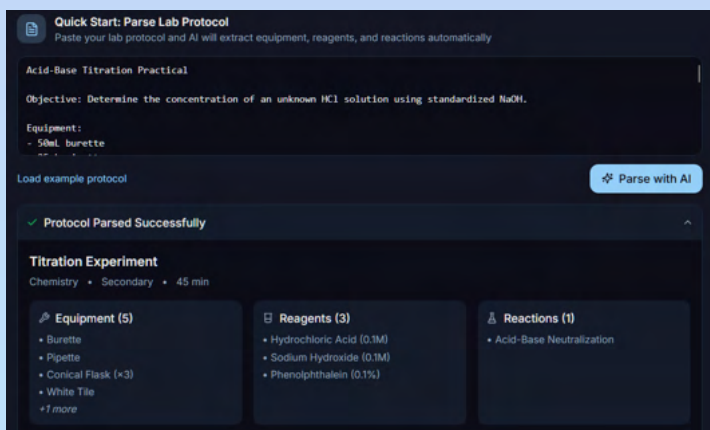

For teachers, our AI Experiment Builder lets you generate bespoke lab scenarios in minutes to fit any lesson plan.

Science for Everyone

Inclusive by default. We support full control remapping, text-to-speech, and self-paced modes for SEND learners. Plus, our low-bandwidth mode ensures smooth operation even on unstable school internet connections.

Rewarding Mastery

We use gamification to drive understanding, not screen time. Students earn free Lab Points for safety and accuracy to customize their virtual workspace. This builds intrinsic motivation to improve skills without using predatory engagement tactics.

WhimsyLabs Pioneer Program

Launching globally in September 2026, but schools and institutions can get early access starting this April (Summer Term).

Sign up now to become a WhimsyLabs Pioneer School and receive exclusive benefits:

- Get full access to the Beta AI Grading and Early Modules for the Summer Term.
- Secure the 2026/27 Academic Year license at our introductory BETT rate.
- Direct access to our dev team to request specific apparatus for the September launch.

Join the Science Education Revolution

Winner of the BETT 2025 Kids Judge Award
